

Immersive Reality

Explore a virtual world... using
your physical body. Your
adventure begins – Now

Are you addicted to VR? Are you taking care of your body?

If you answered yes and no, then you NEED ImmersiveReality.

What is ImmersiveReality?

ImmersiveReality is a device that connects your physical body with your virtual one. Through utilizing a multidirectional treadmill and vitals sensors, ImmersiveReality enables users to move anywhere in the 3D plane in both the physical and virtual world.

Interact With Our Product in TheSanctuary

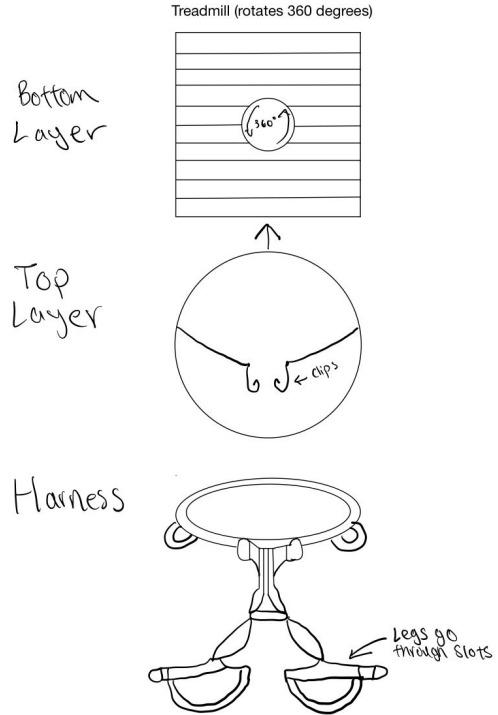

What is TheSanctuary?

TheSanctuary is a virtual space that contains any type of imaginable content. From riding a dragon to raising a family, anything can be done within our created world.

What's the catch?

You must use ImmersiveReality to play our game. Meaning—you must physically use your body in the real world to interact in the virtual world. Thus, you must be physically fit if you wish to win in the virtual world.

The Design:

The foundation of the design relies on the bottom layer treadmill. The treadmill adjusts its speed to match the user's movements. For example, if you are moving at 12 miles per hour in the game, the treadmill will also move at 12 miles per hour.

The top layer consists of a circular barrier that functions as a safety mechanism and a place to clip your harness. The harness is used to enable more range of motion and actions such as jumping, flipping, and diving.

Finally, the wristband wearable tracks users' vital signs and will ping nearby emergency services should your vitals fall outside two standard deviations from the norm.

How do you use ImmersiveReality?

- 1) Establish connection using bluetooth to your VR headset and game
- 2) Step onto treadmill
- 3) Put on harness (make sure to use clips)
- 4) Calibrate device by running in each direction at any preferred speed
- 5) Put on vitals wristband
- 6) Enjoy yourself and reclaim your physical body

What is our mission?

We are here to make you FLOURISH

Our device is designed to help your body become fit and healthy in the real world while you're playing in the virtual world. You will physically and mentally thrive and feel elated as you push your body to surpass its limits.

The device will limit users to 8 hours of runtime per 24 hour period. If users attempt to bypass this 8-hour lock, their device will be temporarily shut down for 1 week, with additional violations leading to longer ban times.

What is the cost of ImmersiveReality?

\$599.99 + \$29.99
