

# STANFORD PRIVATE VIRTUAL ASSISTANT

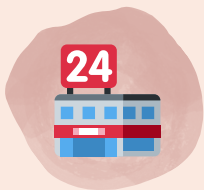

## VIRTUAL ASSISTANT BUILT FOR STANFORD

Modern virtual assistants like Siri and Alexa have become incredibly powerful and support an increasing number of features.

## CONVENIENCE

Our virtual assistant is designed to make life easier for all Stanford students, but particularly freshman who are new to campus.

## DOMAIN SPECIFIC FEATURES

Most virtual assistants offer generic features such as navigation, playing music, or setting alarms. We instead offer Stanford specific features, designed to help students navigate through their daily routines.

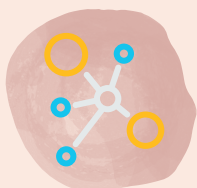

## EXAMPLE FEATURES

Our virtual assistant offers features such as navigation to classrooms, viewing class schedules, or showing dining-hall menus.

## INTEGRATIONS

Beyond just providing features for convenience our virtual assistant also integrates social media and location information in order to create a more interconnected Stanford

# FLOURISHMENT THROUGH SOCIAL CONNECTION

## OUR VISION

Our goal is to build a virtual assistant that not only aids students, but help them learn about and discover campus, while also building a more closely connected campus.

## SOCIAL MEDIA

Our virtual assistant will allow users to integrate social media apps like Spotify or Twitter in order to see things like what songs are most listened to by Stanford students this week, or what students are talking about the most.

## LOCATION

Similarly to social media integrations users can also opt in to sharing their location, creating a constant map of where Stanford students are on campus. This feature will allow students to become familiar with the best spots on campus and will promote a more social and lively campus.
